Dear Sir / Madam,

Recently I received your COVID-19 vaccination.

I did so as I believe I have a duty to protect myself and others from this potentially lethal disease and I believe vaccination to be the best means of achieving this end.

However, I received the vaccine with some reluctance due to the fact it was developed from cell-lines originating from the cells of a foetus that was aborted in 1983.

I received your vaccine in good conscience due to the grave risk presented by COVID-19 and in the absence of being able to receive a non-foetally-produced alternative (such as the CureVac vaccine).

I would like to request that in the future you produce and develop vaccines without the use of cell-lines that originate from aborted foetus'.

Thank you for your important work.

Yours sincerely,

Revd. Benedict Skipper
